Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claim 1-5, 7-23, 25-41, 43 and 44 are rejected under 35 U.S.C. 103(a) as being unpatentable over Foley et al. (US 6663622). Foley et al. disclose a system and method comprising an electrophysiology device (260) including a support structure, a fluid lumen and a fluid outlet (col. 26 lines 27-33); and a suction device including at least one suction pod (266) defining a suction region and a connector that secures the electrophysiology device to the suction device; wherein the electrophysiology device and suction device are respectively configured such that the fluid outlet is within the suction region when the electrophysiology device is connected to the suction device. Foley et al. teach all of the limitations of the claims except the suction device being removably connected to the electrophysiology device. It would have been obvious to one having ordinary skill in the art at the time the invention was made to make the suction device and electrophysiology device separable, since it has been held that
